THE THEFT**

**REDUCE
LOSSES**

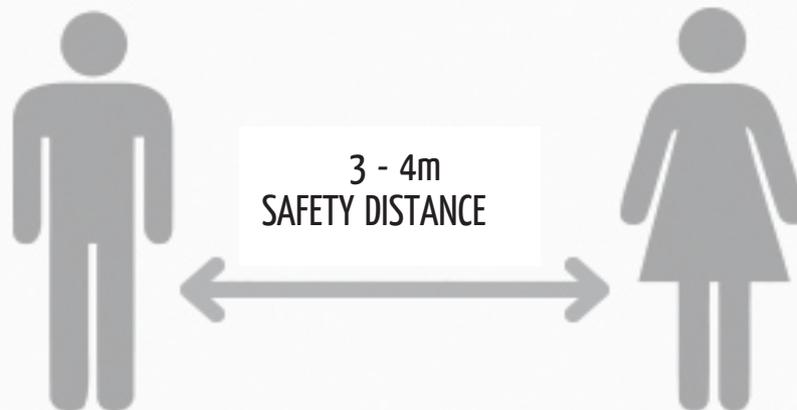

**LOSS
PREVENTION**

UNIQUE DETECTION CAPABILITIES

Unique detection capabilities combined in one integrated system. The screening process in unival LPSS is efficient and employee-friendly.

In addition, the inspection is carried out from a safe distance of 3-4m, so that hygiene concepts and requirements for protection of employees and security personnel can also be accommodated.

If required, fever screening and availability of the PPE equipment such as helmets and masks can also be automatically checked as part of the process.

THRUVISION LPC

THE NEW WAY OF LOSS PREVENTION

Whether production, distribution, logistics or wholesale: all industries are struggling with the same challenges.

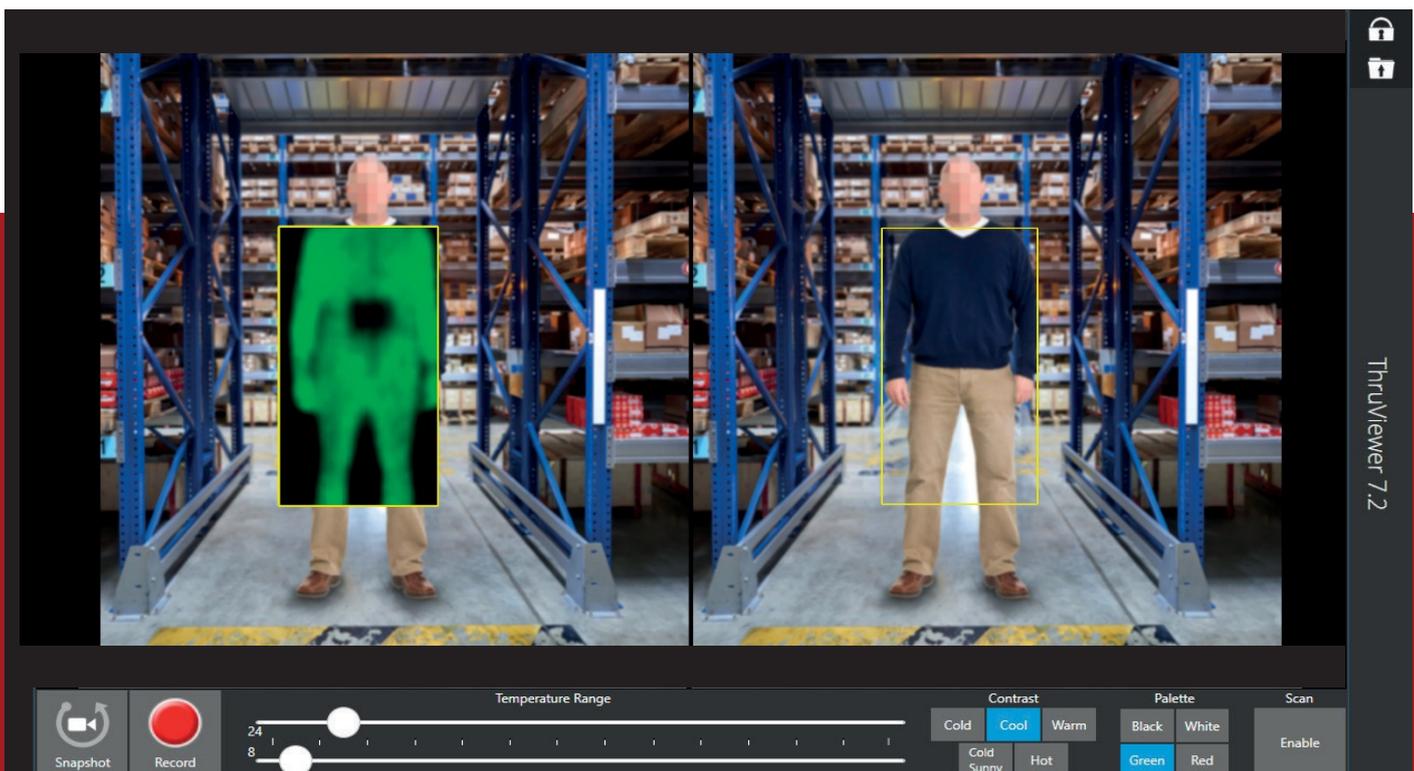

- Theft of goods by employees
- Targeted theft of goods by organised crime
- Returns fraud
- Quantity discrepancies for large deliveries, such as empty boxes in pallets
- Employee complaints due to disproportionate security checks

To create ethical and efficient security without compromise is the philosophy of unival group GmbH.

LPC made it possible, for the first time, to conduct employee security inspection from a safe distance without any need for a physical touch.

Fast, efficient and respectful of the environment, while at the same time providing the highest accuracy and detection rates.

Thus, the LPC allows high security standards without the usual restrictions or discomfort.

ETHICAL

EFFECTIVE

SCALABLE

IT IS PROVEN THAT
THRUVISION LPC
REDUCES THE THEFT
RATE BY up to 80%

- Checking from a distance
- Passive system, no health risks
- Shows no skin color, gender, age or physical appearance
- Twice as fast screening, compared to metal detection

- Up to 80% reduction in theft of goods
- Scalable and expandable
- Successfully used worldwide

Employee-friendly screening by unival

THE COMPLETE SOLUTION

unival offers the Thruvision LPC with various upgrades to provide a tailor-made complete solution:

screening cabins in corporate design & colours

Screening of bags & objects brought along

Operator stations in corporate design & colours

- Ergonomic and modern design
- Can be fully integrated into the unival screening cabin
- Fast conveyor belt speed for screening many objects in the shortest time
- Available in corporate design & colours, for employee-friendly screening

Passive metal detection

Networking of several locations & alarm management

PROSCREEN BV STREAM

PASSIVE METAL DETECTION

The Proscreen is a passive ferromagnetic metal detector which can be combined with the Thruvision LPC to detect the smallest metallic objects on and in the body.

- Passive system, no health risk for pregnant women or persons with pacemakers
- Detects even the smallest ferrous metals on and inside the body
- Can be combined with the Thruvision LPC One screening process for the most comprehensive inspection

AI SUPPORTED SCREENING

The BV STREAM is the ideal system for quick and efficiently screening of the personal belongings of employees to prevent the smuggling of valuable objects.

- Central operation of several networked systems possible from the security control centre
- AI supported detection software

BV SYSTEMS

NON-INVASIVE CONTENT CONTROL

With BV series X-ray systems, the contents of returns, as well as entire deliveries/dispatches, can be screened efficiently for contents verification.

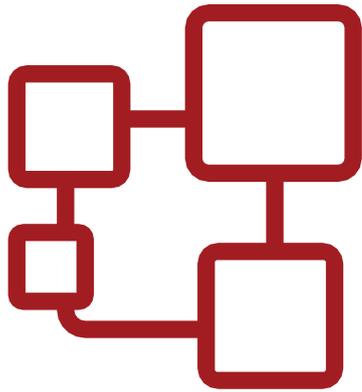

- Single or dual view possible
- Fast and reliable checking

- Various sizes and models available
- Available in corporate design & colours
